

80C31 Communications Microcontroller SNAP 651™

Features

- ✓ Small, low power 8051-family controller
- ✓ Three full RS232 serial ports
- ✓ RS485 support option
- ✓ 32 parallel I/O lines
- ✓ 32K CMOS RAM included
- ✓ Accepts up to 64K RAM, 64K EPROM
- ✓ Battery-backed clock option
- ✓ On-board BASIC option
- ✓ C and BASIC languages available
- ✓ Interrupt-driven C async comm library

The SNAP 651 Communications Microcontroller provides a complete, ready-to-use 8051-family controller on a 3" x 7" circuit board. With 3 full serial ports, the controller is optimized for serial communication applications. It is ideal for embedding into OEM equipment, for implementing small to medium sized end applications, and as a platform for prototyping communication-intensive 8051-family designs.

The standard SNAP 651 comes with the 80C31 CPU, a ROMless, CMOS versions of the popular 8051 processor. Alternative processors avail-

able include the 80C32 with an additional timer and interrupt, and the 8052 with a built-in BASIC interpreter.

CMOS logic is used throughout the SNAP 651 for low power consumption and cooler operating temperatures. Reliability is enhanced with provisions for battery-backing on-board CMOS RAM, power-fail interrupt capability, and a watchdog timer system to monitor proper system operation. An optional real-time clock provides clock and calendar functions.

Software Support

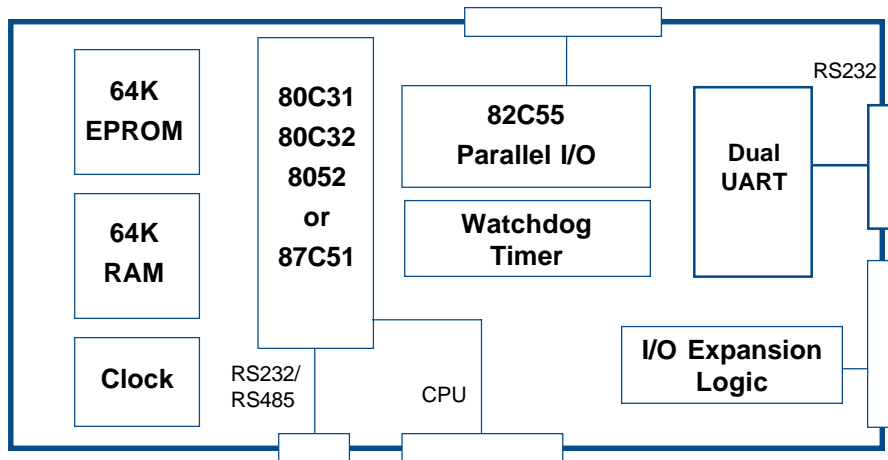

Comm library, CommBLOK-51
PID loop library, PidBLOK-51
C compilers
BASIC interpreter, compilers
[Items above in Section 6]

Compatible Hardware

LCD and keypad, LCDKBD1
RS485 comm, TB1485
[Items above in Section 4]
Power system, PS1000
[Item above in Section 5]
Custom

Mounting/Packaging

Standoffs, Snaptrack™,
DIN rails
[Items above in Section 5]
Custom

Technical Details:

SNAP 651 is available with a choice of 3 CPU devices, 80C31, 80C32, or 8052 with built-in BASIC interpreter.

Serial communication and control is fully supported with 3 independent serial ports. The 80C31 internal UART is fully supported in RS232 mode. RS485 support can be added as an option. Two 80C31 I/O pins can be used to implement CTS/RTS modem control lines for this port in RS232 mode. The RTS line can alternatively be used to enable/disable the RS485 transmitter for multi-drop operation. The second and third serial ports support full sets of RS232 modem control lines. A C language library is available for simplified, interrupt-driven, buffered communication on all 3 channels. Another RS232 serial output can be configured for printer output if the 8052 BASIC option is used.

SNAP 651 80C31 processor ports are available at a 26-pin connector. An optional 34-pin con-

necter implements an I/O expansion bus with 80C31 address/data ports and "off-board" read and write signals, interrupts, and timer signals. An 82C55 device is included to add 24 parallel lines which are available at a 26-pin I/O connector.

Two 32-pin memory sockets are included on the SNAP 651. The first supports up to 64K of EPROM or flash EPROM, the second supports up to 64K of CMOS static RAM, which can be battery-backed. On-board programming of flash EPROMs is supported, allowing simple field program updates without removing any memory devices. The SNAP 651 ships with 32K CMOS RAM memory installed, additional memory is optional.

Program development can be done in on-board BASIC, compiled BASIC, compiled C, or 8051 assembly language. Micro/sys supplies many development aids for the SNAP 651, including compilers, assemblers, software libraries, and hardware mounting kits.

Specifications:

Mechanical:

- ❑ 3.0" x 7.0" x 0.6"
- ❑ Mounting holes (0.13" dia.) in four corners
- ❑ Mount on standoffs, Snaptrack, or DIN rail

Power Requirements:

- ❑ +5V \pm 5% at 120mA
- ❑ On-board programming of flash EPROM requires +12V \pm 5% at 30mA
- ❑ Off-board battery (optional) 6V at 50 μ A, can be common PC type battery pack

Environmental:

- ❑ 0° - 70°C operating
- ❑ -40° - 85°C storage
- ❑ 5%-95% relative humidity, non-condensing

Processor:

- ❑ 80C31, 11MHz clock standard
- ❑ Six interrupts (2 hardware), 2 counter/timers, 8-bit I/O port, expansion ports
- ❑ 16MHz option for higher performance
- ❑ 80C32 option adds timer and interrupt
- ❑ 8052 option includes built-in BASIC interpreter, RS232 printer output

Memory:

- ❑ 32K CMOS RAM installed
- ❑ Socket for program code accepts 27C256 for 32K, or 27C512 for 64K EPROM
- ❑ Contact factory for current flash EPROM device support
- ❑ RAM socket can accept 128K RAM (64K usable) and can be battery backed

Serial Ports:

- ❑ 80C31 serial port plus 2692 dual UART, RS232 interfaces on-board
- ❑ Baud rates from 110 - 19,200
- ❑ RTS/CTS supported
- ❑ RS485 option on 8031 serial port, RTS can be used to enable transmitter
- ❑ 8052 BASIC model has RS232 printer out

Parallel I/O:

- ❑ 32 lines total, some have alternate uses as interrupt or timer signals
- ❑ 24 lines from 82C55 - sink 2.4mA, source 2.4mA
- ❑ 8 lines from 80C31 - sink 1.6mA, source 0.08mA

CPU Signal Connector

Watchdog Timer:

- ☐ Program must strobe watchdog every 1.6 seconds or reset will be issued
- ☐ Enable/disable jumper

Real-time Clock Option:

- ☐ Uses 3 parallel port lines of 80C31
- ☐ Provides hours, minutes, seconds, day of week, date, month, and year
- ☐ Can use off-board battery or on-board battery option

External Connections:

- ☐ Power: 7-pin header, mating cable supplied
